Web Application Interaction Design

Cold Calling Made Easy: Insights and Solution summary

PROJECT

www.reallygreatsite.com

INTRODUCTION

So, What's The Point?

The following prototypes demonstrate a proposed user interface (UI) and user experience (UX) for a newly redesigned cold-calling site.

Mockups serve as a blueprint by outlining core interactions and concepts before production.

These prototypes are created to illustrate an improved user experience and application interaction.

The goal is to answer three questions. Do these reflect our users' needs? Does this solve the outlined problem? Is the solution user-friendly?

INTRODUCTION

... And You Are?

I'm a UX Researcher and UI Designer.

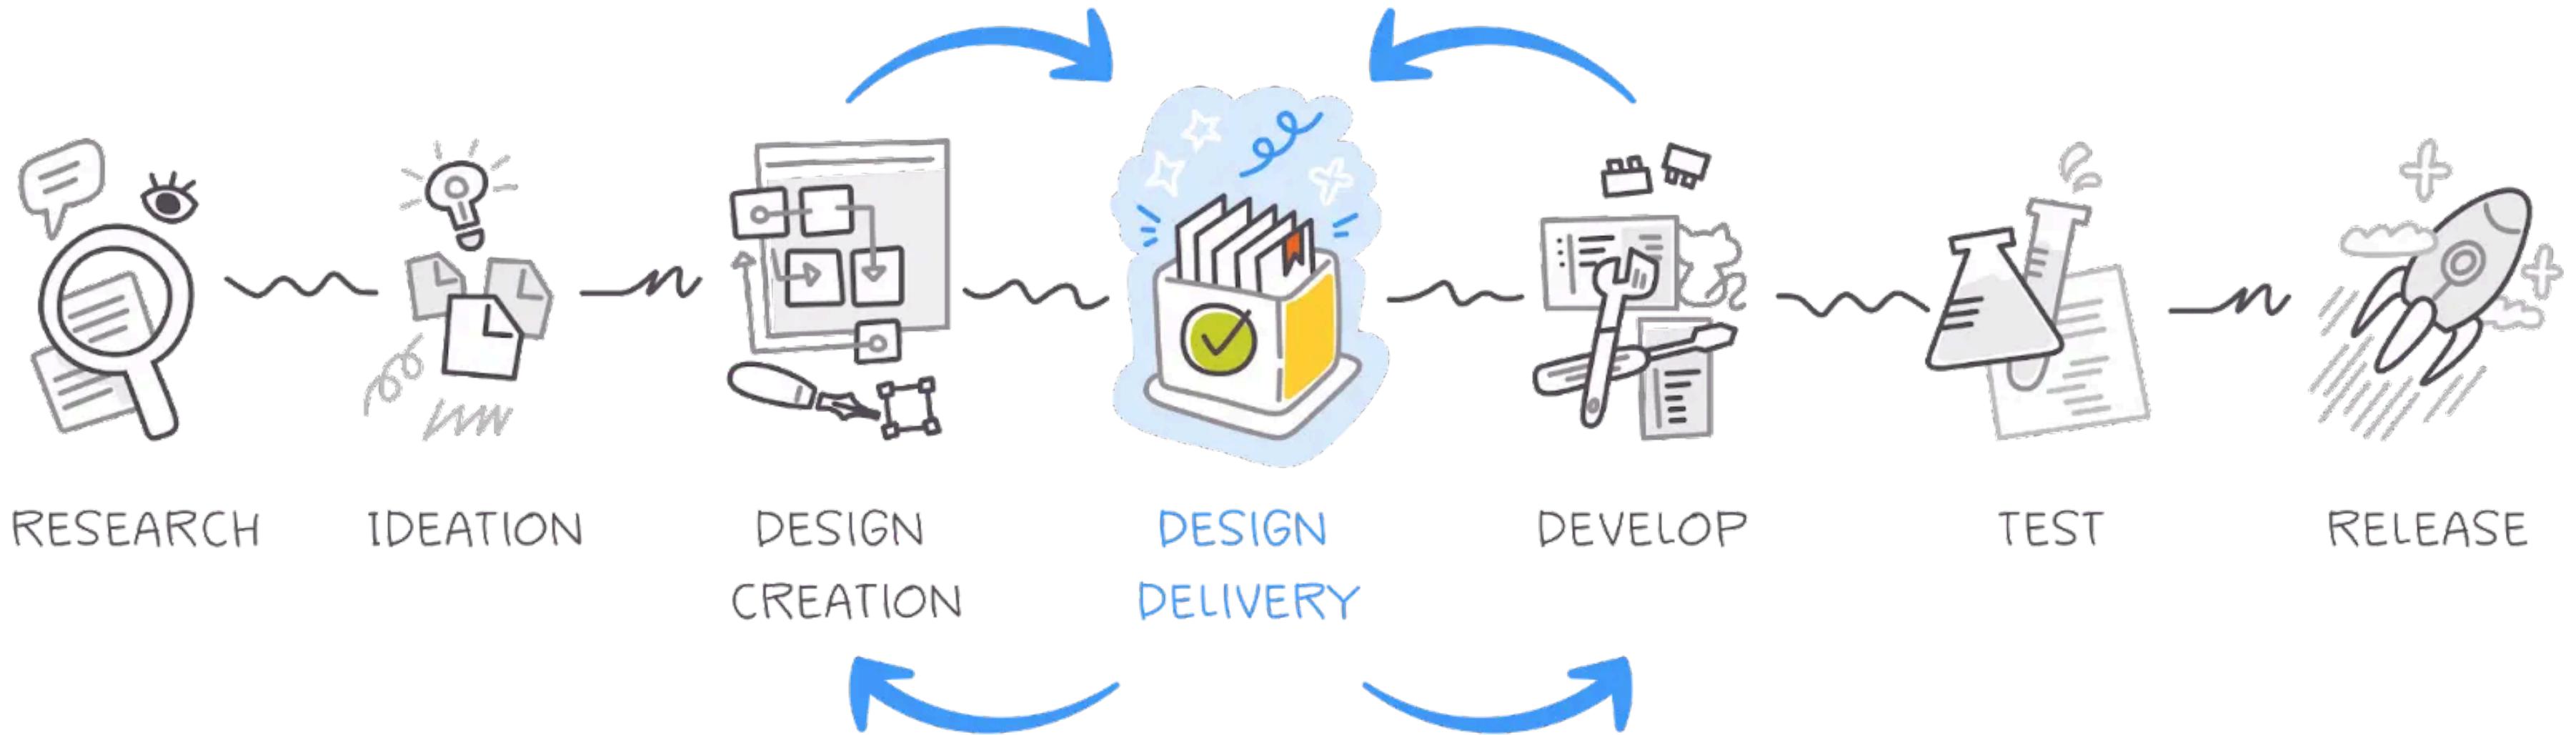

I investigate the current system for improvements and iteratively create an improved recommendation based on user feedback, ensuring a well thought-out and user-friendly solution,

UX

User experience (UX) design is the process design teams use to create products that provide meaningful and relevant experiences to users.

UI

In the industrial design field of human–computer interaction, a **user interface (UI)** is the space where interactions between humans and machines occur.

INTRODUCTION

Project Summary

1.

Problem Statement

The current system is prone to security issues and human error.

2.

Goal

Simplify the process and improve data security.

3.

Proposed Solution

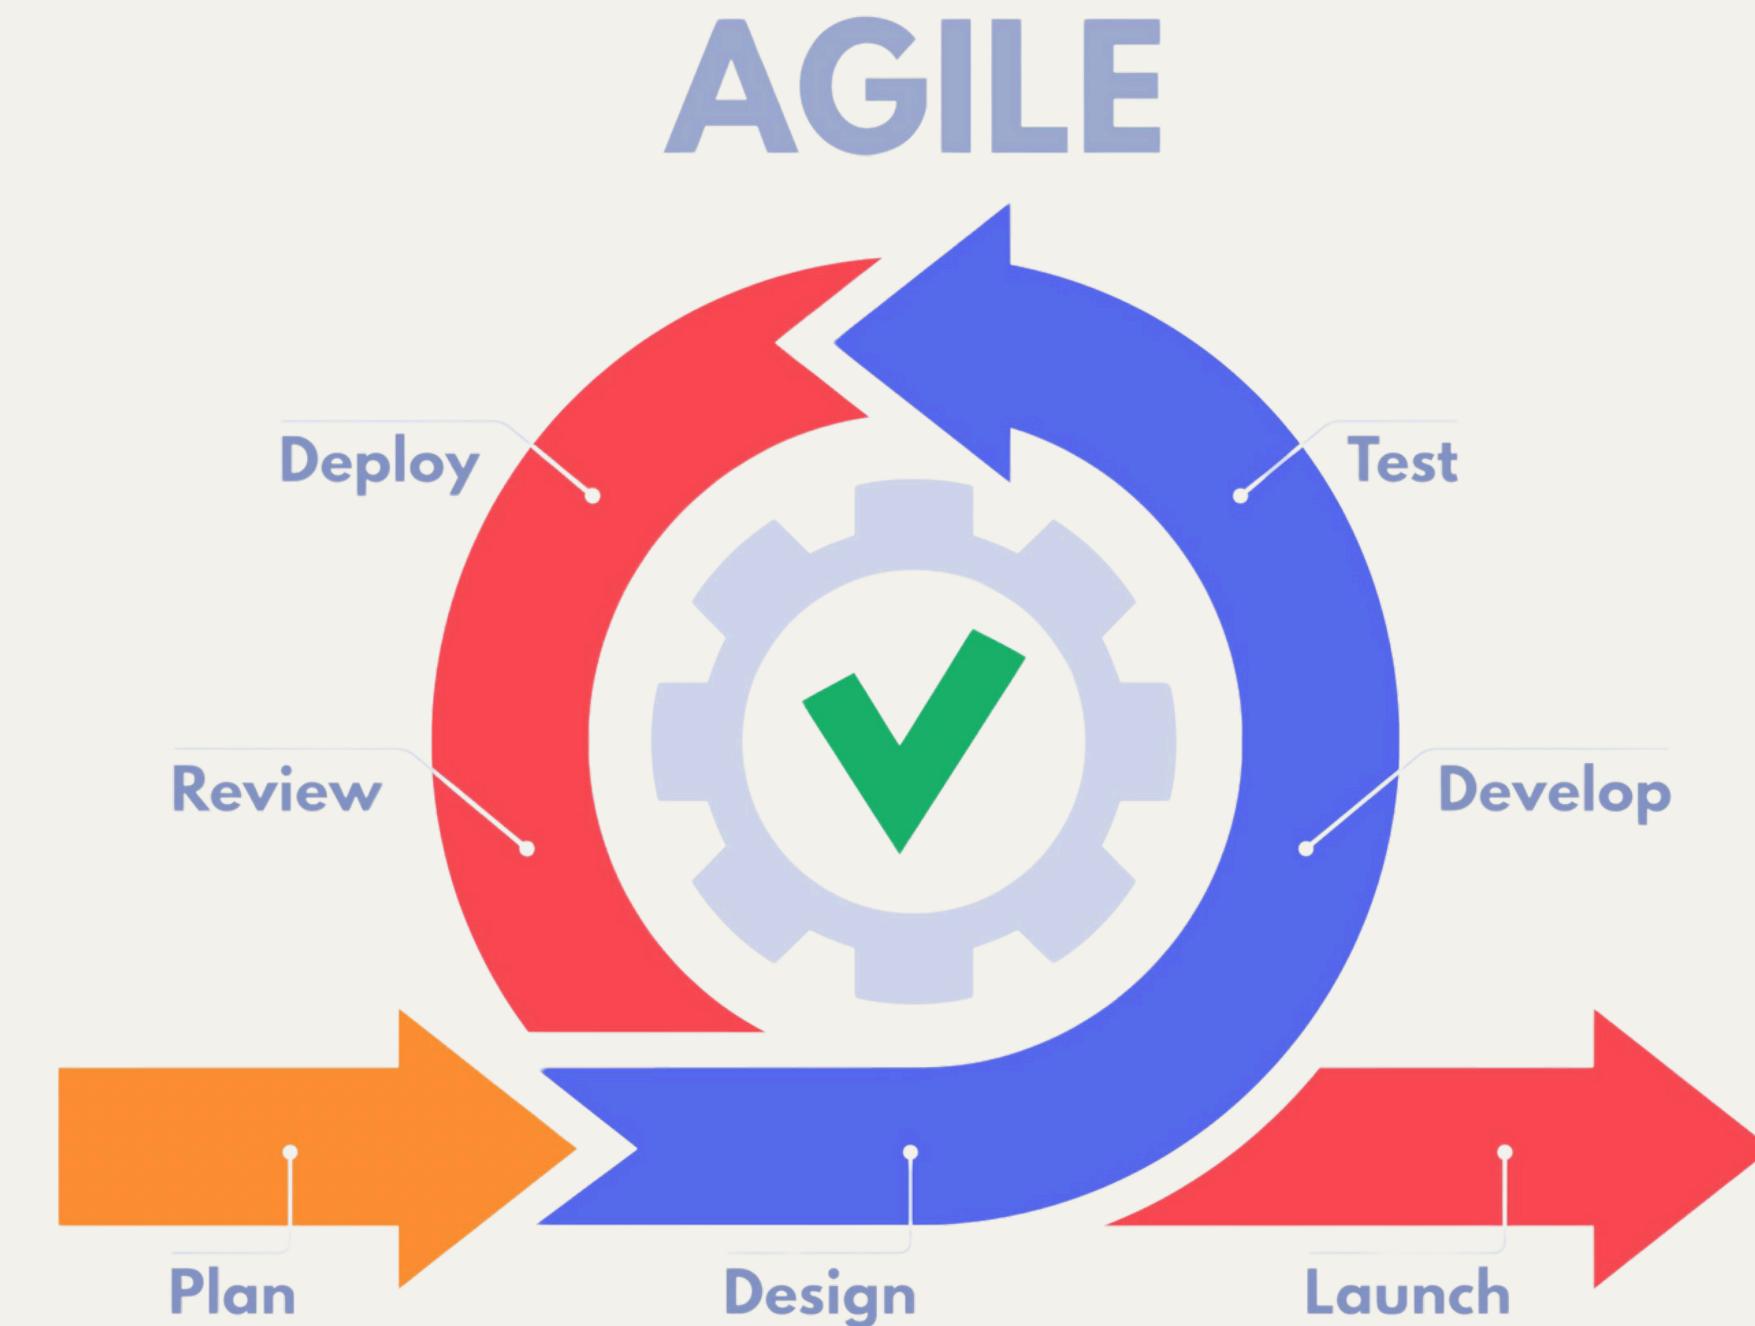

Create a dedicated web-app to replace the current system.

PLANNING

Agile Development

Iterative testing,
evolving design,
consistent improvement.

**MINIMISING RISK,
MAXIMISING REWARDS.**

Current System: Pitfalls

1. Call Sheets can be downloaded.

Current System: Pitfalls

1. Call Sheets can be downloaded.
2. Difficult to track call progress.

"We also have to track our calls and our leads on a separate excel spreadsheet, so by the end of it we have about three different things open that we need to make notes on."

– Initial user interviews

Current System: Pitfalls

1. Call Sheets can be downloaded.
2. Difficult to track call progress.
3. Messy comments section.

"can get tedious, have so many comments on each entry of the excel sheet and you're just adding to the mess."

- Initial user interviews

Current System: Pitfalls

1. Call Sheets can be downloaded.
2. Difficult to track call progress.
3. Messy comments section.
4. Tedium and mistake-prone tracking process.

"We also have to track our calls and our leads on a separate excel spreadsheet, so by the end of it we have about three different things open that we need to make notes on."

- Initial user interviews

"I keep 4 tabs that I use each time I make a call. It's exhausting"

- Initial user interviews

Current System: Pitfalls

- 1. Call Sheets can be downloaded.**
- 2. Difficult to track call progress.**
- 3. Messy comments section.**
- 4. Tedious and mistake-prone tracking process.**
- 5. May take a while for Database Manager to update sheets.**

"Major flaw I've noticed is that a lot of numbers don't exist, I usually update these myself."

- Initial user interviews

Current System: Pitfalls

1. Call Sheets can be downloaded.
2. Difficult to track call progress.
3. Messy comments section.
4. Tedious and mistake-prone tracking process.
5. May take a while for Database Manager to update sheets.
6. It's easy to forget which blocks a user has called recently.

"It's so difficult to coordinate between people. I get given a spreadsheet every week, and it's difficult to know what everyone else has and if the spreadsheet was used recently."

- Initial user interviews

Current System: Pitfalls

1. Call Sheets can be downloaded.
2. Difficult to track call progress.
3. Messy comments section.
4. Tedious and mistake-prone tracking process.
5. May take a while for Database Manager to update sheets.
6. It's easy to forget which blocks a user has called recently.
7. Users forget to track their calls.

"we also have to track our calls and our leads
on a separate excel spreadsheet [...] it's
tedious and easy to forget to do a step of the
process, which obviously isn't good."

- Initial user interviews

Problem Statement

“IT IS DIFFICULT TO MONITOR AND TRACK CALLS AND LEADS THAT HAVE BEEN MADE AND STILL NEED TO BE MADE WITH THE CURRENT SYSTEM. THIS NEEDS TO BE OPTIMISED TO REMOVE HUMAN ERROR AND INCREASE DATA SECURITY ABD INTRA-TEAM COMMUNICATION”.

SCOPE

Proposed Solution

"DEVELOP A WEB-APP TO HELP TEAM MEMBERS TRACK THEIR COLD CALLS AND ALLOW TEAM LEADER TO MONITOR TEAM MEMBER PROGRESS."

SCOPE

Databases & Spreadsheets

The current system makes use of **spreadsheets**.

SCOPE

Databases & Spreadsheets

The current system makes use of **spreadsheets**.

SPREADSHEETS ARE COMPUTER PROGRAMS THAT ARRANGE DATA IN A SERIES OF ROWS AND COLUMNS. DATA IS STORED IN INDIVIDUAL CELLS OF THIS ELECTRONIC DOCUMENT. SPREADSHEETS ARE OFTEN COMPARED TO ELECTRONIC LEDGERS.

SCOPE

Databases & Spreadsheets

I suggest we upgrade the system to make use of a **Database**.

DATABASES GATHER INFORMATION FROM EXTERNAL TABLES,
INSTEAD OF STORING DATA IN INDIVIDUAL CELLS. DATABASES ALSO
HAVE A **FLEXIBLE** STRUCTURE, GIVING YOU MORE OPTIONS FOR
STORING AND EVALUATING DATA.

Databases & Spreadsheets

I suggest we upgrade the system to make use of a **Database**.

DATABASES GATHER INFORMATION FROM EXTERNAL TABLES,
INSTEAD OF STORING DATA IN INDIVIDUAL CELLS. DATABASES ALSO
HAVE A **FLEXIBLE** STRUCTURE, GIVING YOU MORE OPTIONS FOR
STORING AND EVALUATING DATA.

We won't fuss too much about the differences between the two – we largely just care about the interaction and how it will benefit us as users.

Database Views

Large amounts of data stored in the database can be viewed in a number of formats, making it a versatile and robust data storage technique.

TABLE I

ITERATION 1

Information Architecture

CARDSORTS

An example of a card sort done for this project.

ITERATION 1

Information Architecture

... And this would eventually lead us to something like this.

ITERATION 1

Information Architecture

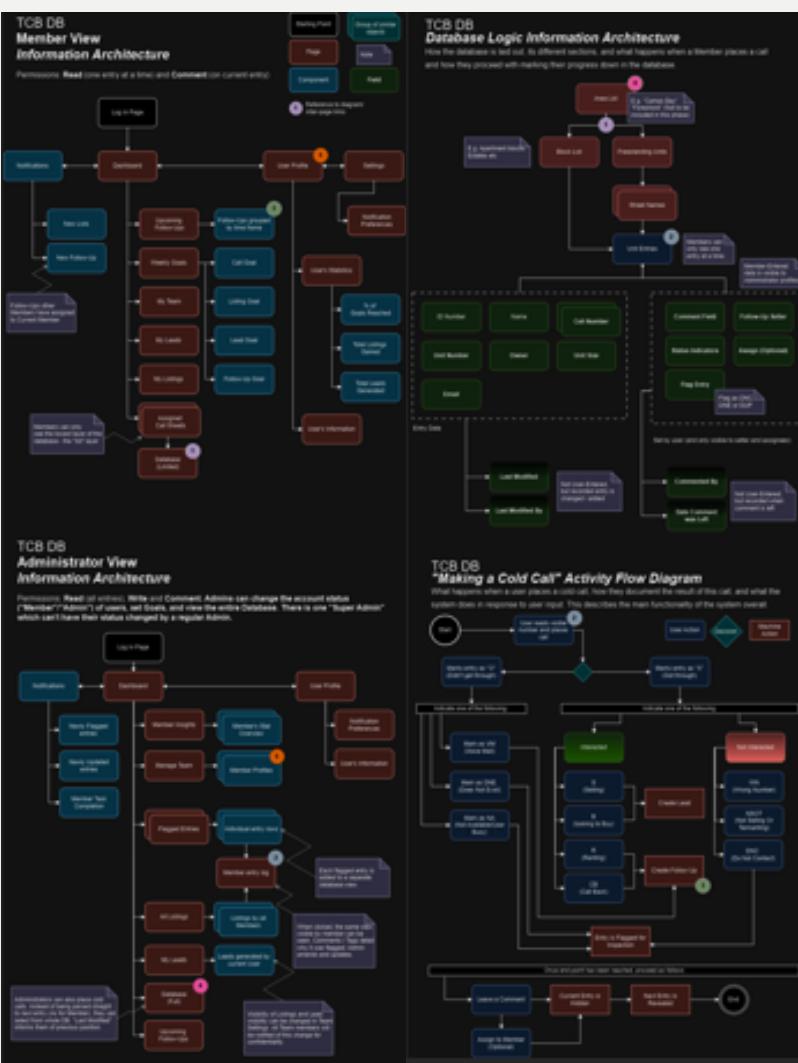

Once you've added a bit more detail, you get something that looks quite intimidating.

ITERATION 1

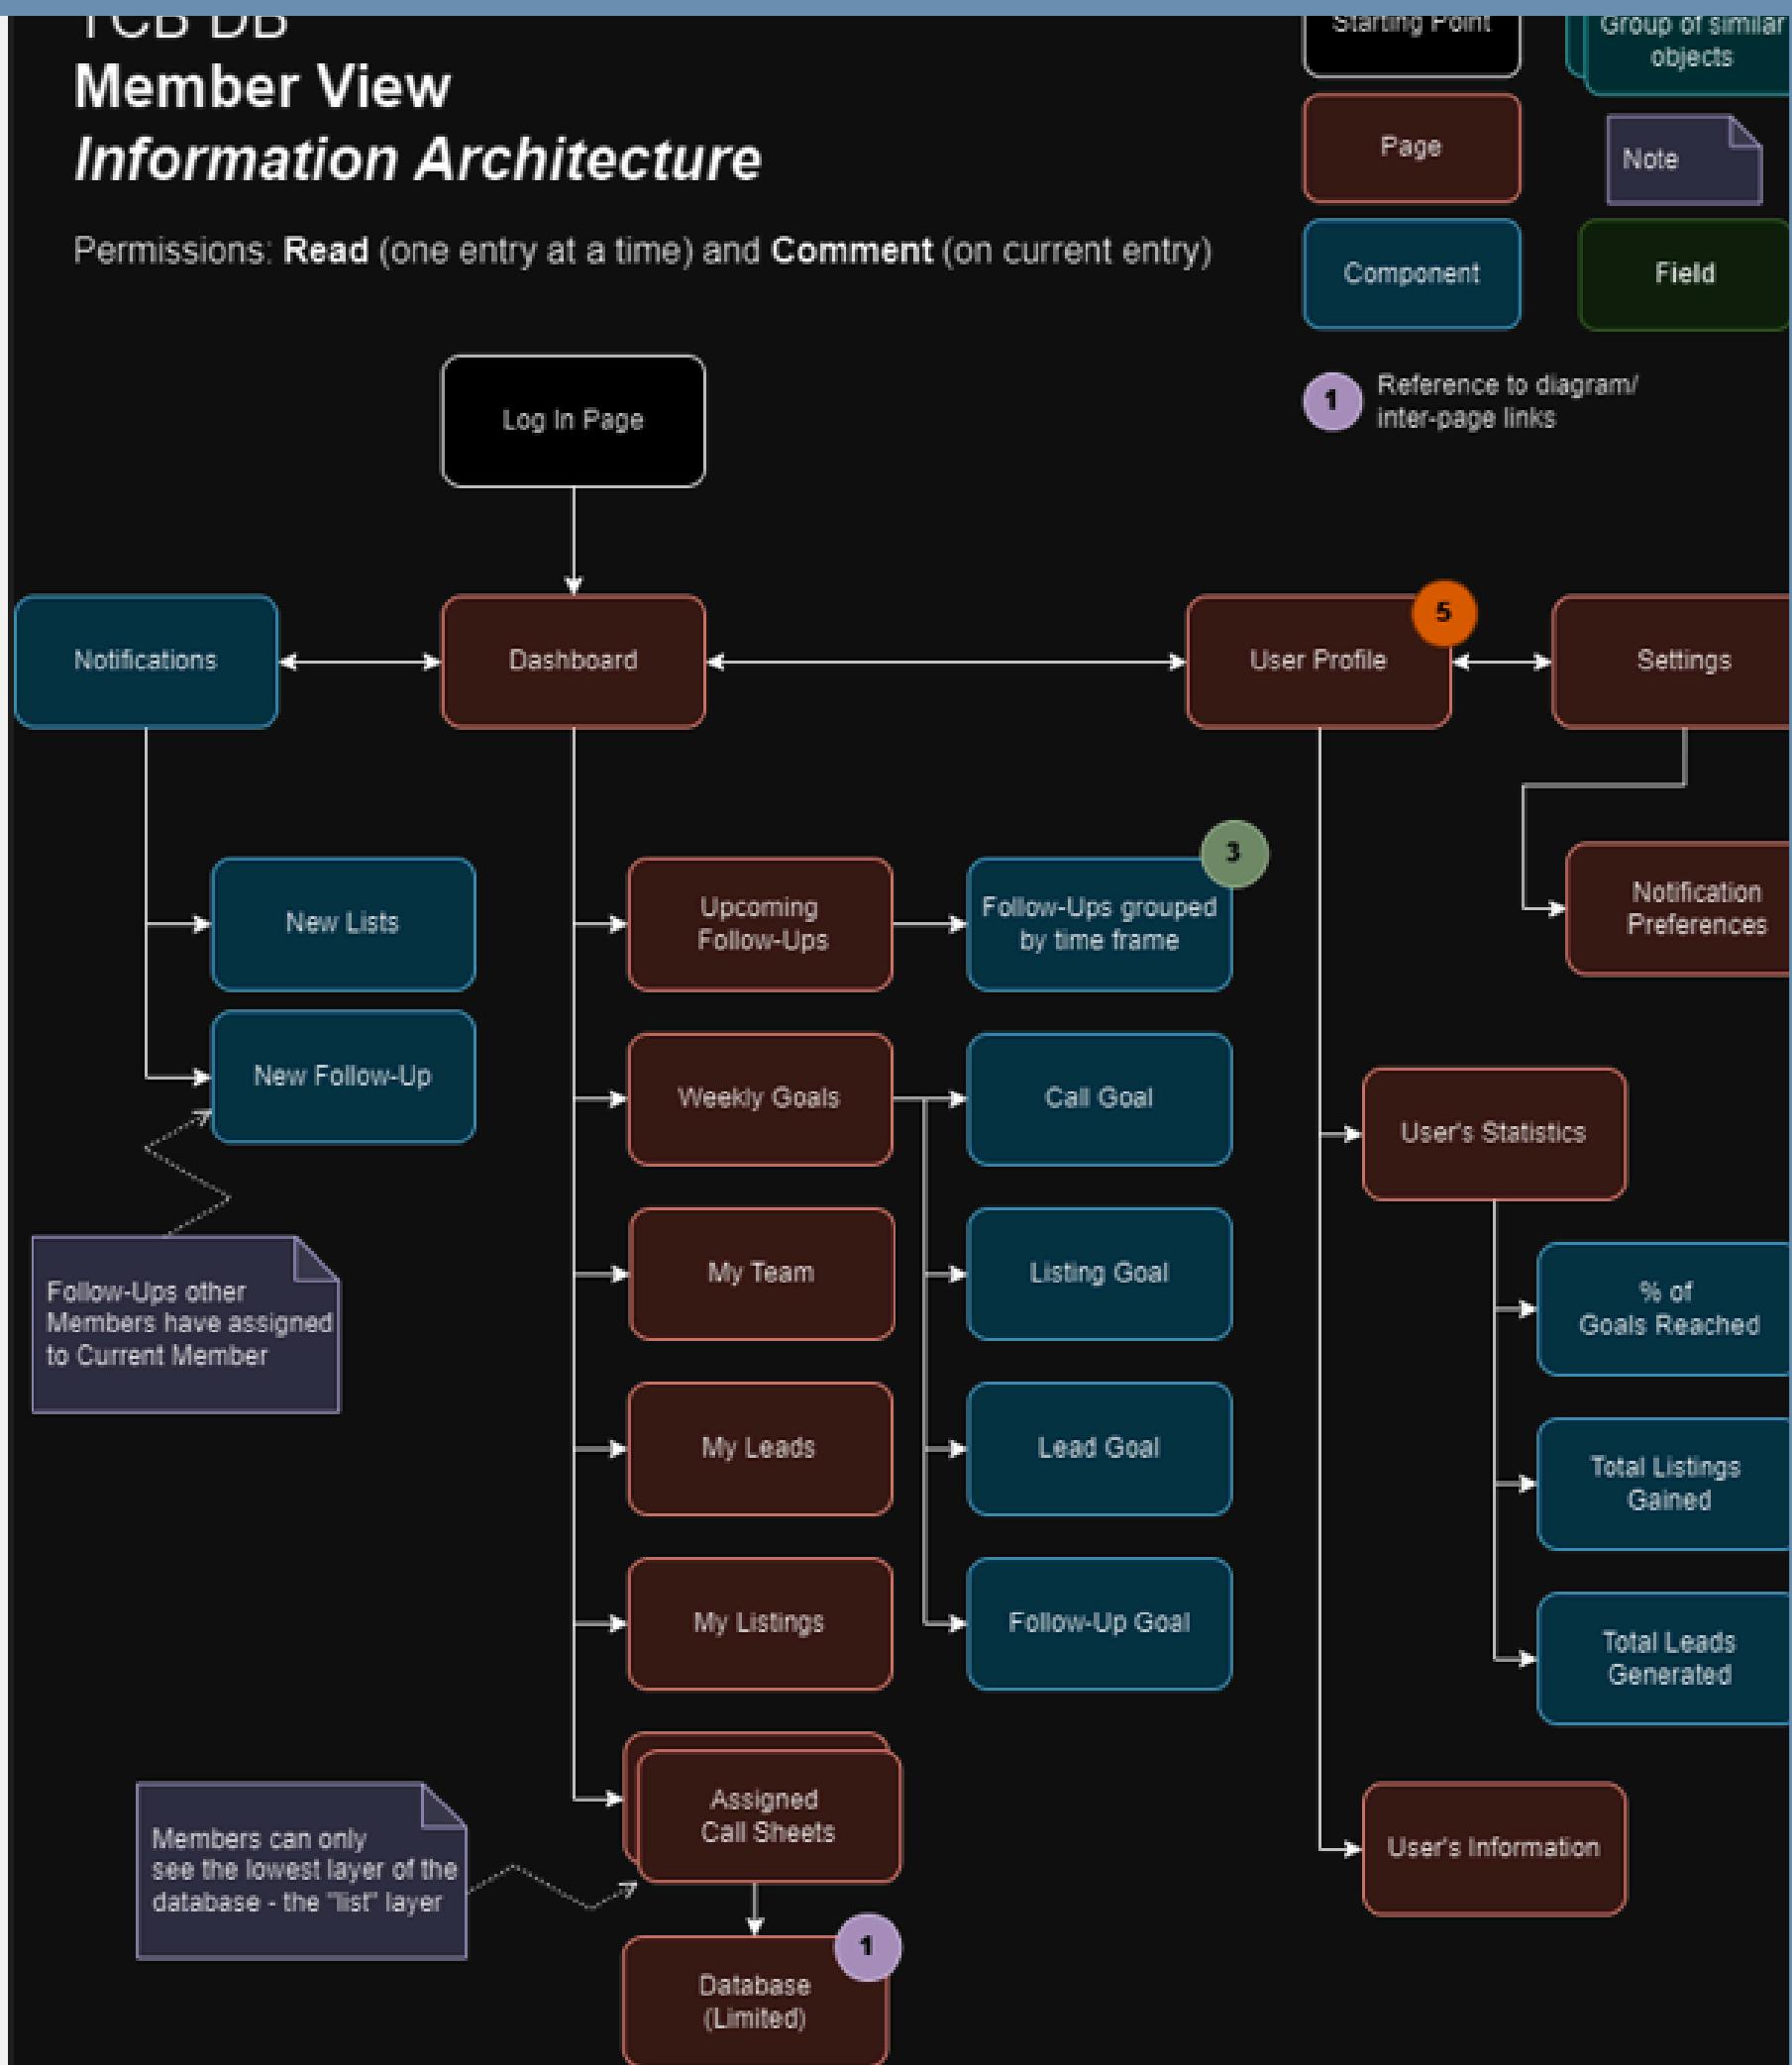

Information Architecture

Once you've added a bit more detail, you get something that looks quite intimidating.

There's a whole lot more.

But don't worry! This is just to help visualise overall design and interactions to help the designers and the developers.

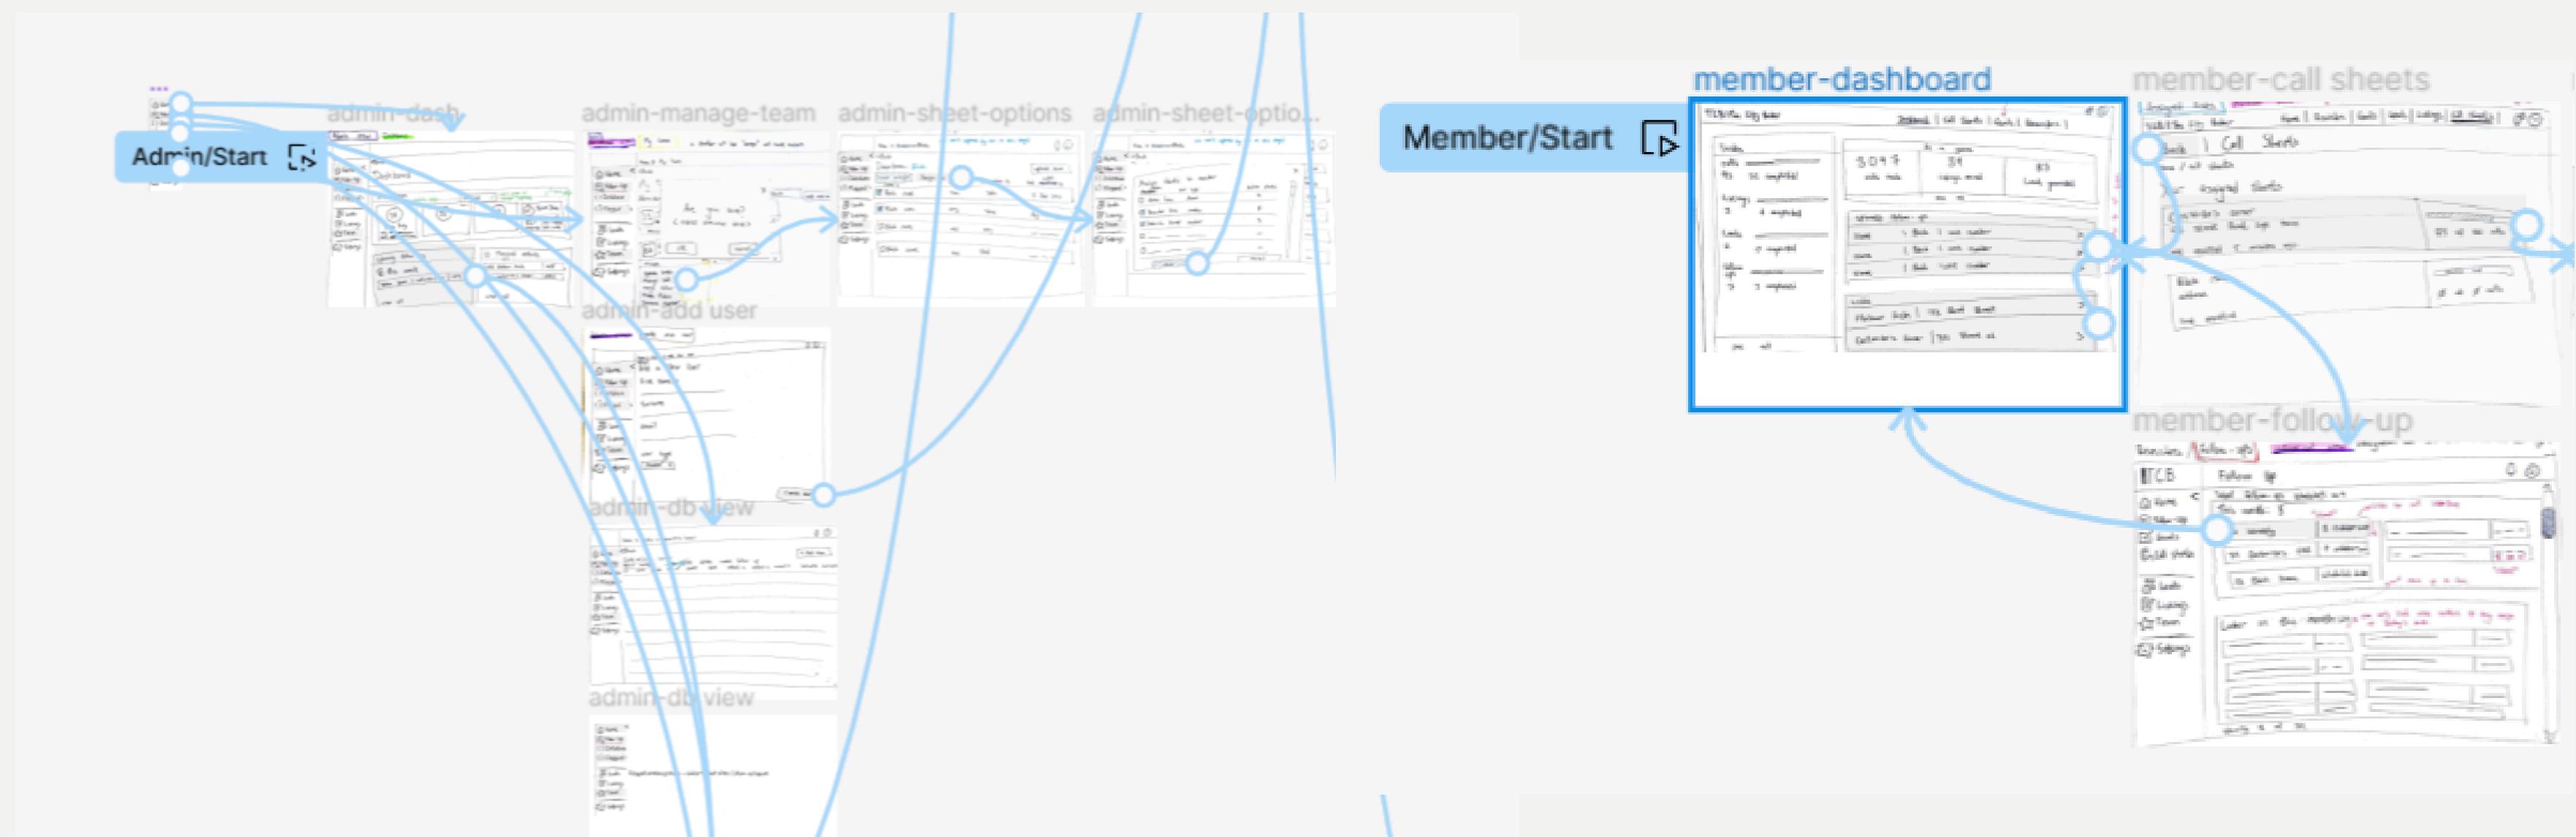

ITERATION 1

Lo-Fi Wireframes

GETTING AN IDEA

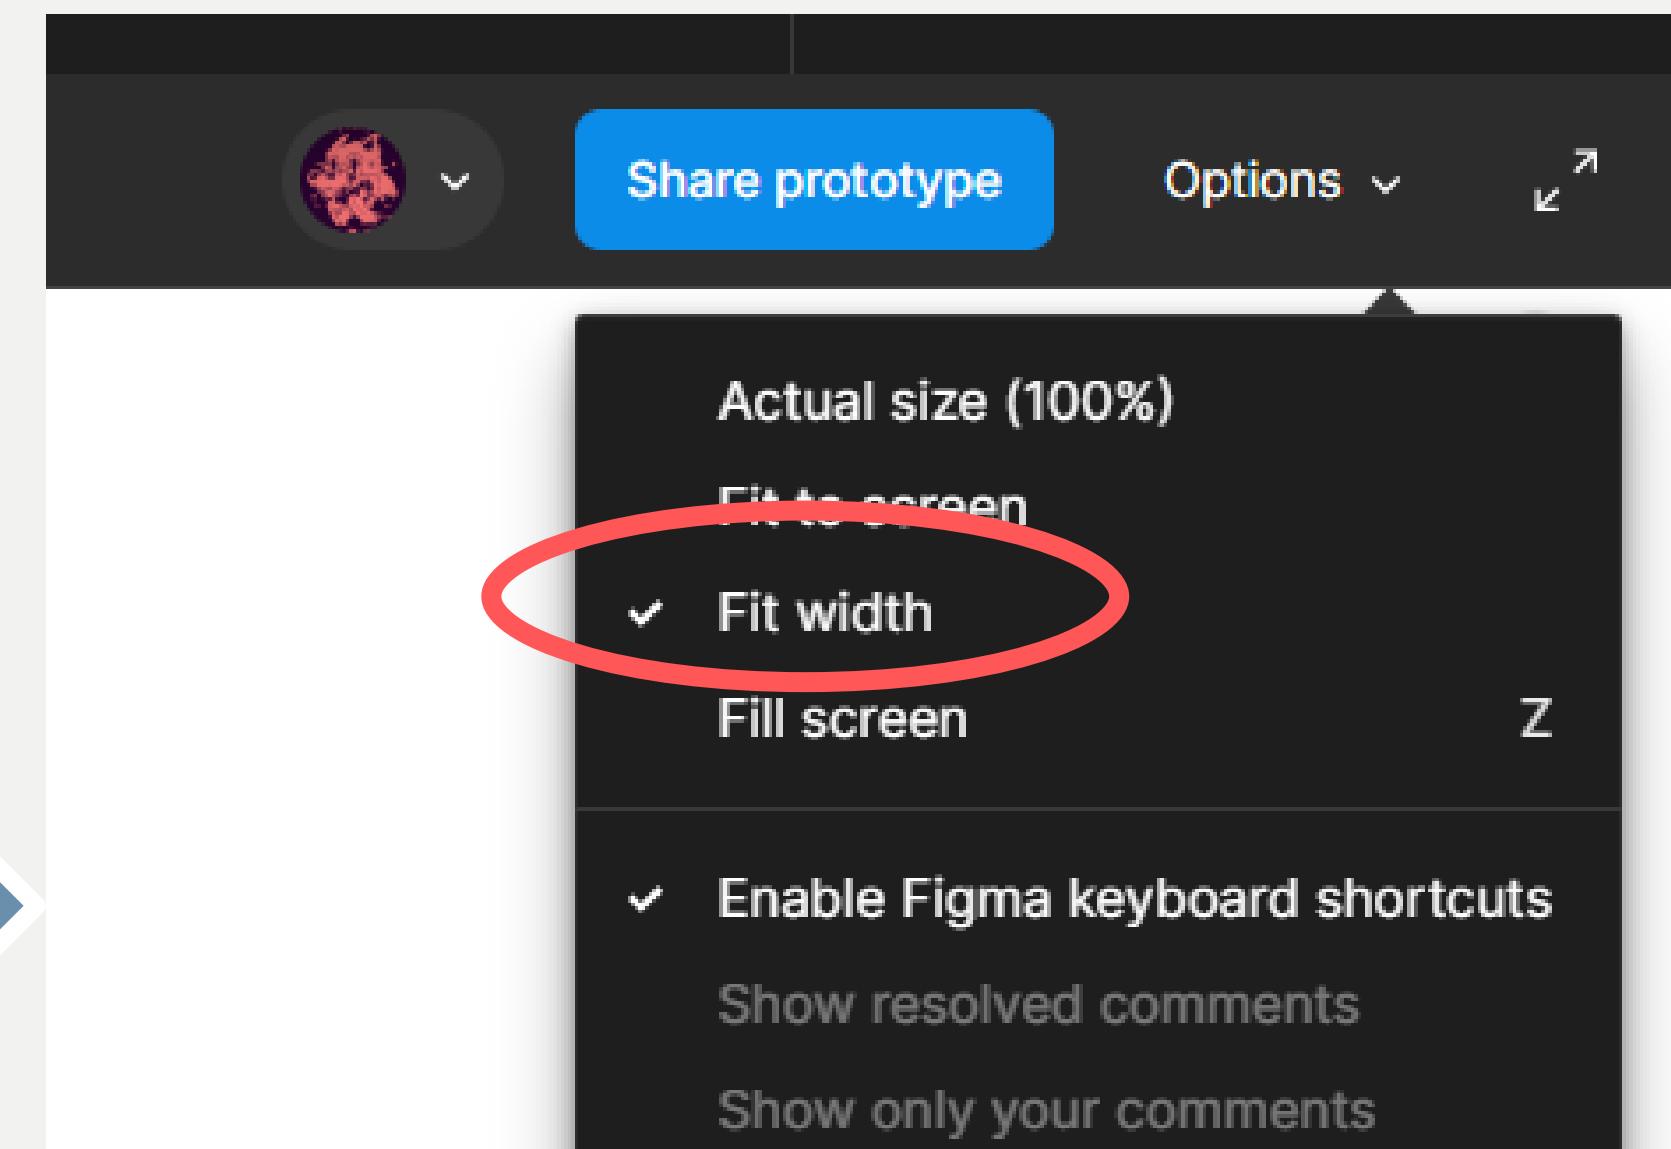

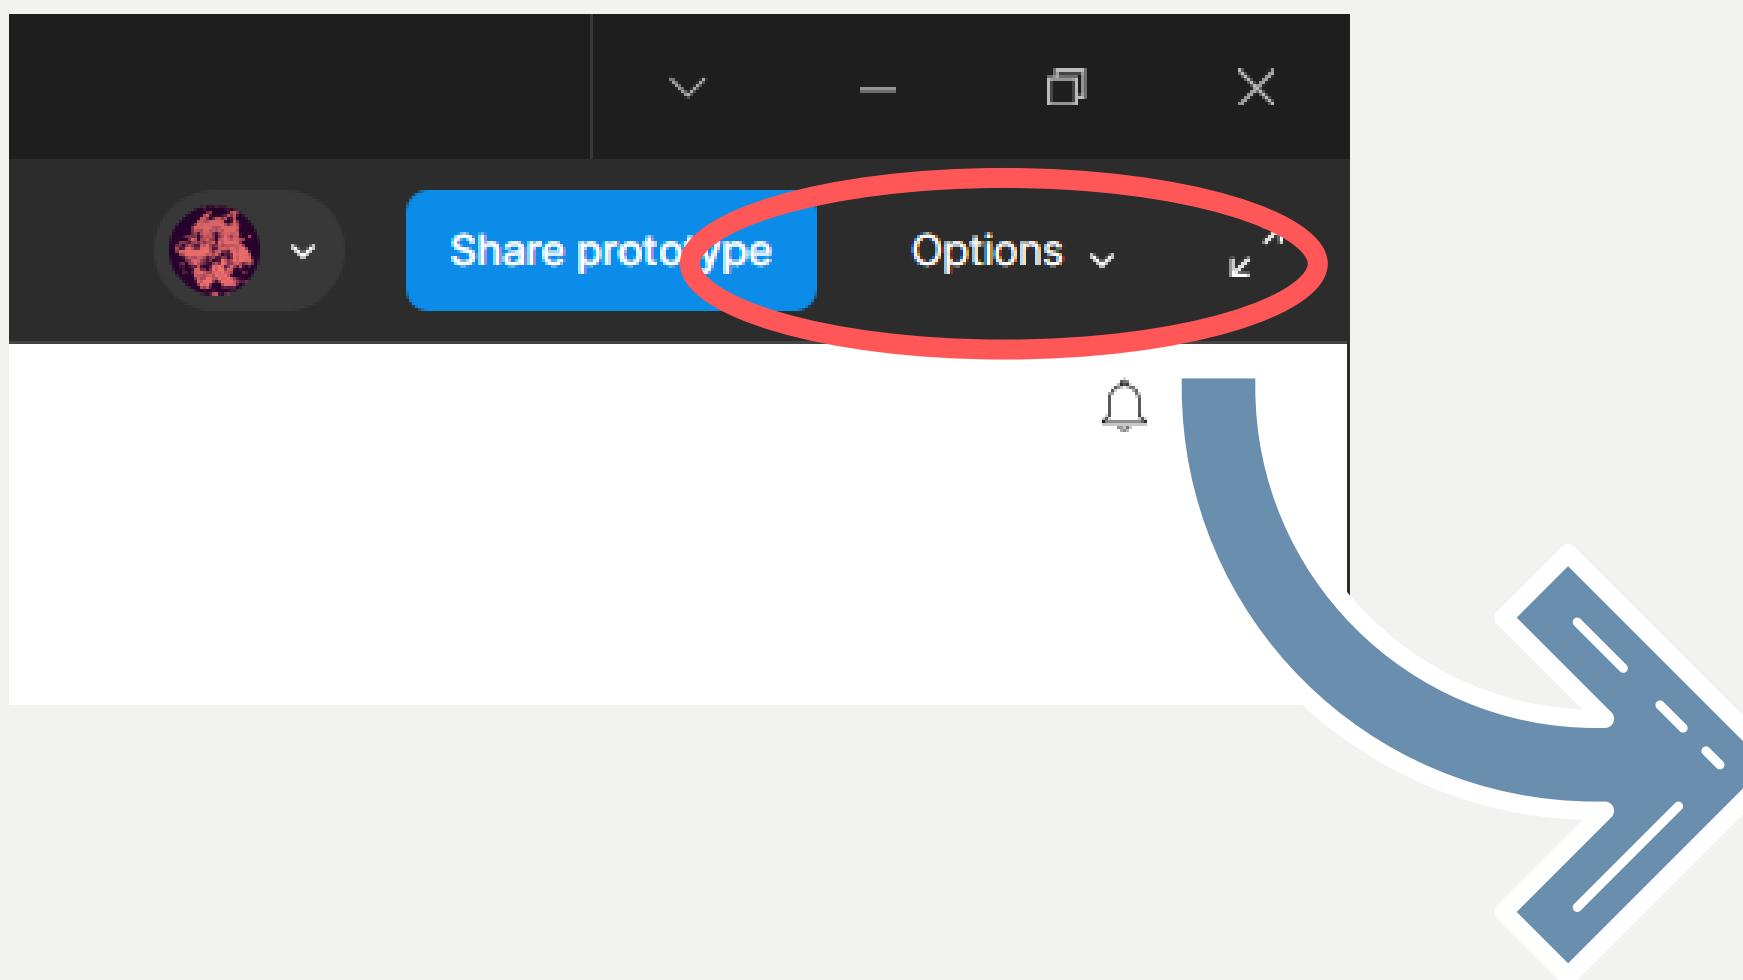

Quick & Easy wireframes to block out general ideas of where certain components should go, and how they connect.

P.S.

A Side Note

WHEN VIEWING PROTOTYPES, SET VIEW TO “FIT WIDTH” UNDER OPTIONS (TOP RIGHT).

DEMONSTRATION

From Concept to Prototype

AN EXAMPLE

Before we get started, I want to run through an example of the development process.

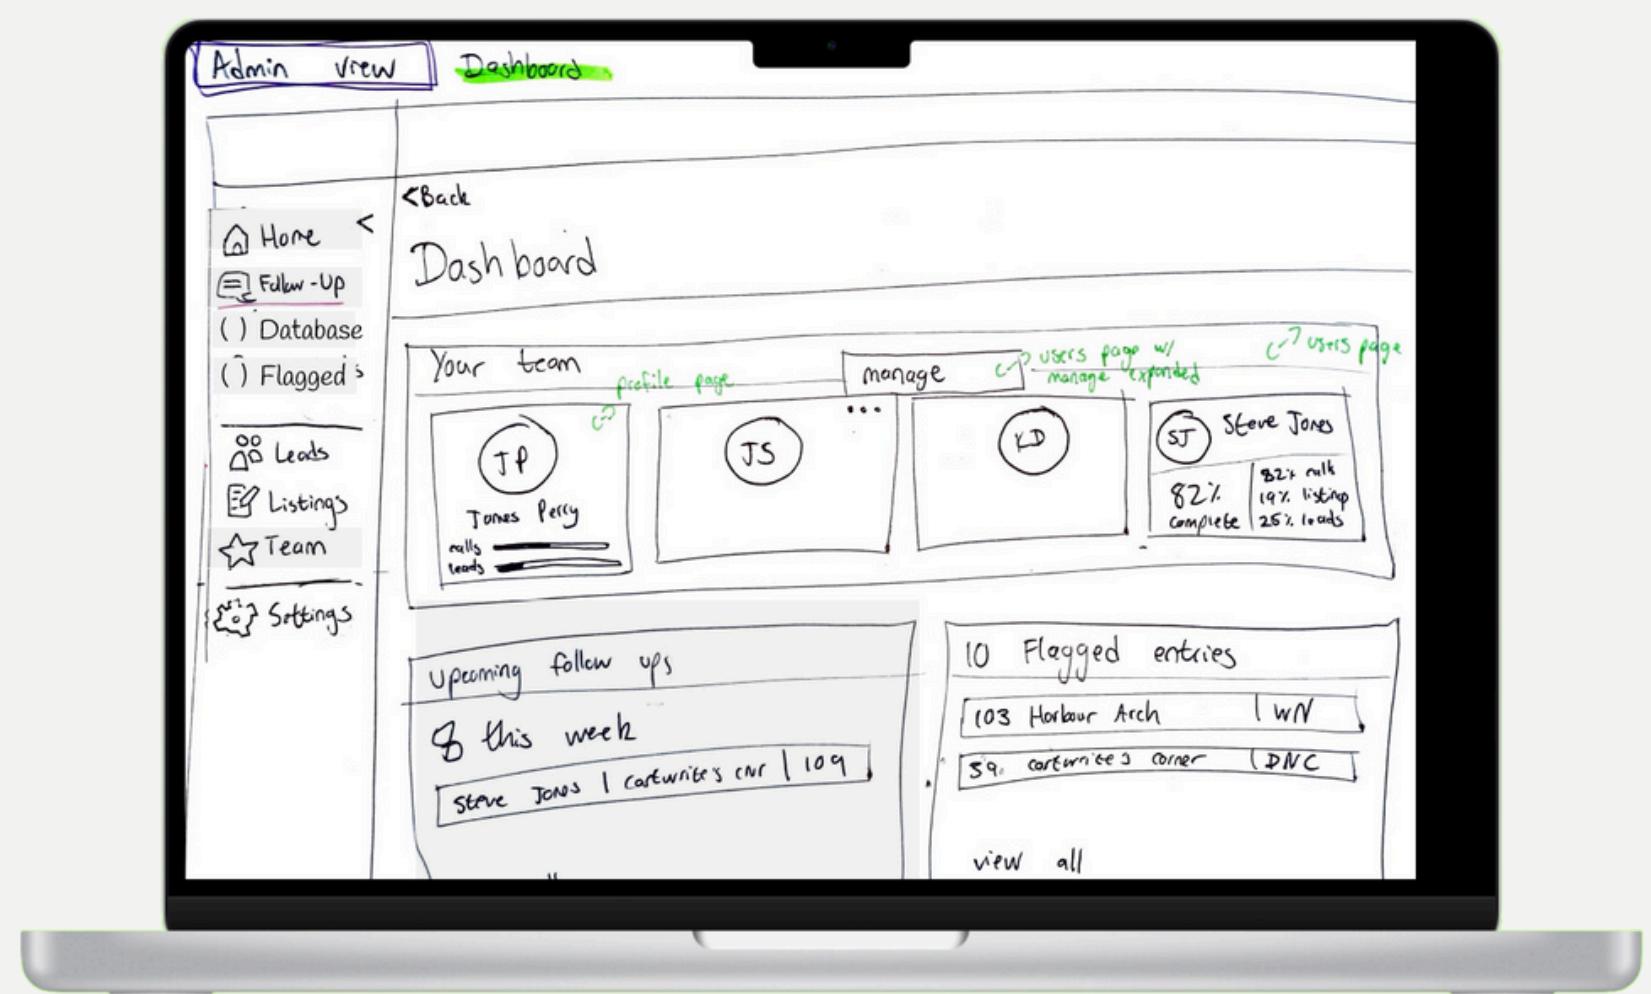

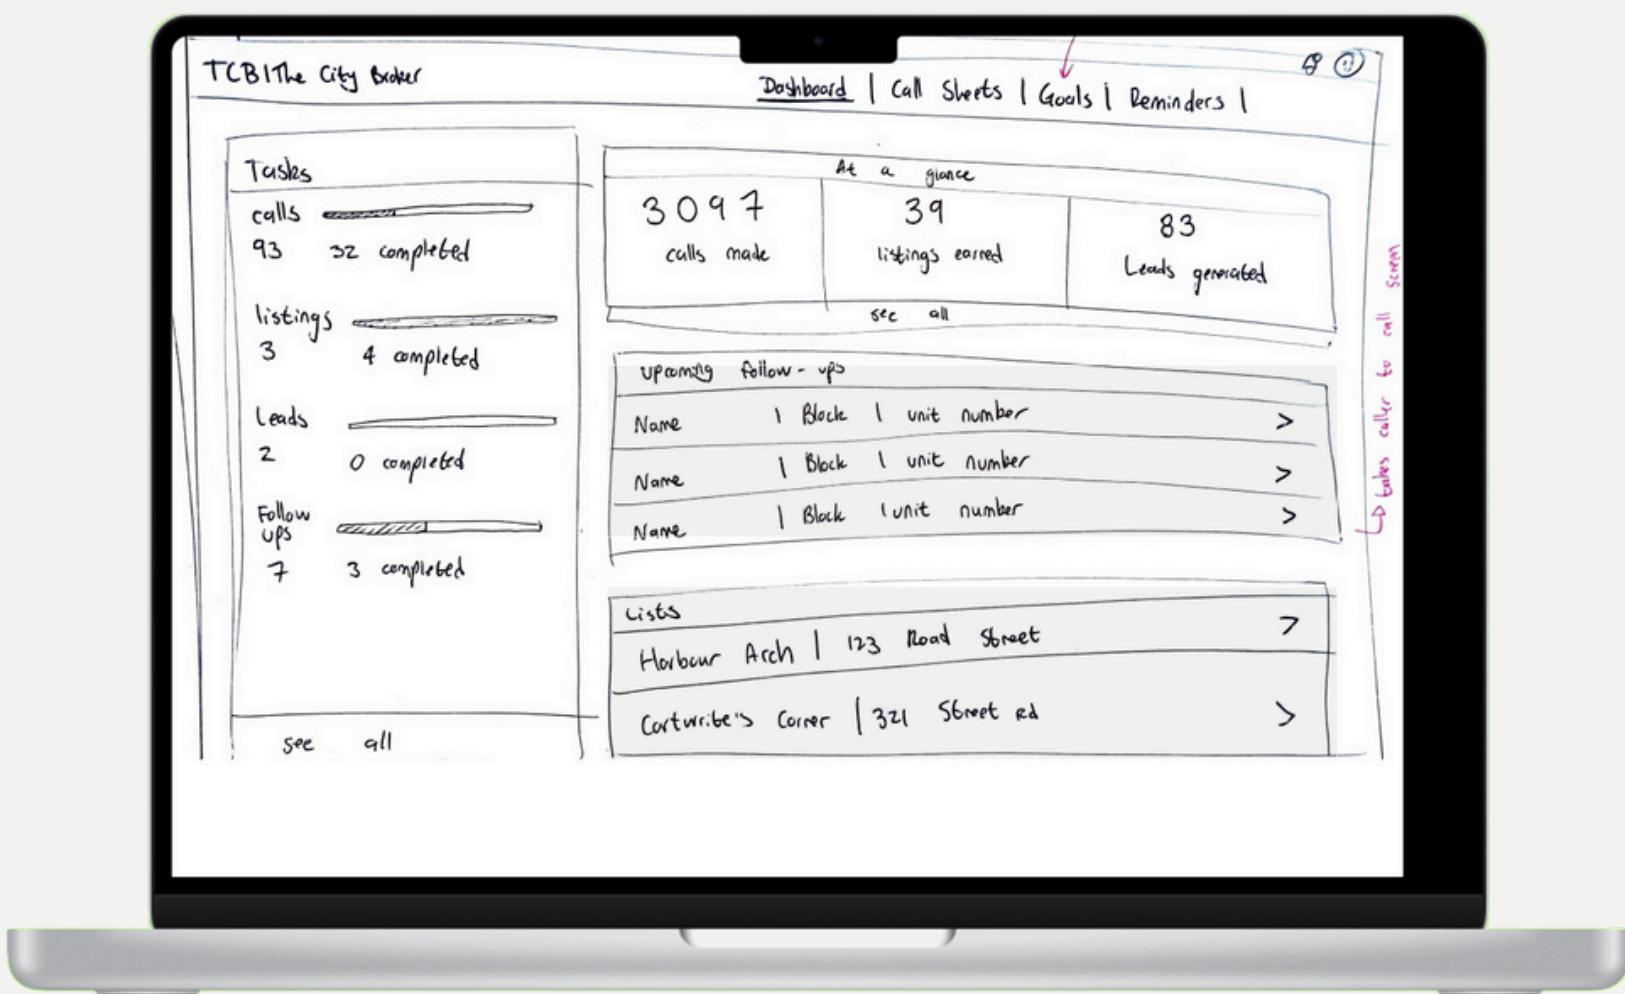

**“Placing a Cold Call”
User Journey Development Process**

ITERATION 1

Lo-Fi Wireframes

TESTING SIMPLE INTERACTIONS

Paper wireframes converted to digital to help users understand the digital space.

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.

"If someone calls me back then I go back and edit my entire entry. Not being able to move freely through a list would be an issue"

– Initial user interviews

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.
2. Users wanted to see who's calling what

"Want to see who's calling what.
Administration issues, sometimes we get
assigned lists that have been called recently."

- Initial user interviews

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.
2. Users wanted to see who's calling what
3. Users think the statistics may not demonstrate effort accurately.

"I'm managing 7 listings right now, so I don't really need to make new cold calls. It could look bad on me to have not met my tasks, but I'm busy with non-quantifiable duties."

- Initial user interviews

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.
2. Users wanted to see who's calling what
3. Users think the statistics may not demonstrate effort accurately.
4. Users are protective over their contacts.

"If I get a callback from one person I don't want someone else stealing my lead."

- Initial user interviews

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.
2. Users wanted to see who's calling what
3. Users think the statistics may not demonstrate effort accurately.
4. Users are protective over their contacts.
5. Users didn't need Listings or Leads tabs.

"Not sure if listings section is useful - we have PropData for that"
- Initial user interviews

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.
2. Users wanted to see who's calling what
3. Users think the statistics may not demonstrate effort accurately.
4. Users are protective over their contacts.
5. Users didn't need Listings or Leads tabs.
6. Users wish to see Flagged Entries.

"Keep [flagged entries] visible, I would want to be able to skip through flagged entries but still see that they're there."

- Initial user interviews

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.

"I feel like I'm being micro-managed."

2. Users wanted to see who's calling what

- Initial user interviews

3. Users think the statistics may not demonstrate effort accurately.

"Being limited to Member functionality would frustrate me."

4. Users are protective over their contacts.

5. Users didn't need Listings or Leads tabs.

6. Users wish to see Flagged Entries.

7. Users feel they have a lack of agency.

- Initial user interviews

""I think the user should go back and fourth to jump between number to number. This feels like a complete block."

- Initial user interviews

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.
2. Users wanted to see who's calling what
3. Users think the statistics may not demonstrate effort accurately.
4. Users are protective over their contacts.
5. Users didn't need Listings or Leads tabs.
6. Users wish to see Flagged Entries.
7. Users feel they have a lack of agency.
8. Flagging entries for review is not efficient.

"If I was a caller then I'd want to edit, but I can see how giving admin access to callers is problematic."

- Initial user interviews

ITERATION 2

User Testing

NOW LET'S SEE WHAT WE CAN DO BETTER.

Now that users are able to make sense of what they see on screen, we can conduct usability testing.

1. Users wished to move freely through the entries.
2. Users wanted to see who's calling what
3. Users think the statistics may not demonstrate effort accurately.
